

# Eric Le

## AI Engineer

✉ me@erclx.dev 📞 +46 73 970 87 91 🌐 erclx.dev 📄 erclx 📁 erclx 📍 Gothenburg, Sweden

## Profile

---

I build the layer between a language model and the job it has to do. In practice that means agents, the developer tooling around them, and the full-stack work of making either usable by someone else. Two and a half years of that so far: eighteen months of paid work at Volvo Technology, and everything since has been my own, published rather than parked in a repository. I came to it from engineering physics and complex adaptive systems at Chalmers.

## Professional Experience

---

### Associate Data Scientist

Nov 2024 – Jun 2025

*Volvo Technology, Gothenburg*

- Rebuilt the test-data agent into a multi-step SQL pipeline with session memory, owned end to end from design through deployment.
- Tested by engineers against their own data.

**Technologies:** Python, LangGraph, OpenAI, PostgreSQL, S3, Kubernetes, Streamlit

### Applied AI Intern

Jun – Sep 2024

*Volvo Technology, Gothenburg*

- Deployed the thesis plotting agent to an engineering group in France and prototyped its SQL successor.

**Technologies:** Python, LangChain, OpenAI, Streamlit, SQL

### Master's Thesis

Jan – Jun 2024

*Volvo Technology, Gothenburg*

- Built LLM agent translating natural language to Python plotting code with sandboxed execution for truck telematics data.

**Technologies:** Python, LangChain, OpenAI, Streamlit

### Generative AI Intern

Jun – Aug 2023

*Bac Ha Software, Hanoi*

- Reproduced published GAN architectures for image inpainting and pre-trained them on GPU.

**Technologies:** Python, TensorFlow, Generative Adversarial Networks (GANs)

## Projects

---

### canon, Developer CLI

Jan 2026 – Present

*npm · GitHub*

- Installs one source of agent rules, skills, and standards into every repository, with a sync that touches only files already present so it stays safe to re-run. Carries the plan, review, and ship loop as Claude Code skills, and audits prose and docs against the same source.

**Technologies:** TypeScript, Bun, Bash, Claude Code, GitHub Actions

### annex, EU AI Act Compliance Agent

Sep 2026

*GitHub*

- Built an agent over the EU AI Act to test whether retrieval beats reading the whole law directly: measured full-context stuffing against vector search and graph traversal on the same question set, cited to source articles with an explicit refusal where the text does not settle it.

**Technologies:** Python, LangGraph, local LLM, vector search, knowledge graphs

**Jobtriage, Web Application**

May 2026

*Live demo · GitHub*

- Answers job-search questions against Sweden's public JobTech APIs, with a spatial React Flow canvas and BYOK across Anthropic, OpenAI, Gemini, and local Ollama. Running live for anyone without a key.

**Technologies:** TypeScript, Next.js, Vercel AI SDK, React Flow, Python, FastAPI, SQLite, Cloud Run

**Caret, Chrome Extension**

Mar – Apr 2026

*Chrome Web Store · GitHub*

- Keeps a prompt library one keystroke away in Claude, Gemini, and ChatGPT, with trigger-symbol search and keyboard-driven injection. Installed from the Chrome Web Store.

**Technologies:** TypeScript, React, Chrome Extension API, Vite, GitHub Actions

**Stackr, VS Code Extension**

Dec 2025 – Jan 2026

*VS Code Marketplace · Open VSX · GitHub*

- Gathers scattered files into one prompt-ready block, with drag-and-drop staging, live token counting, and pinned files that survive session restarts. Installed from both the VS Code Marketplace and Open VSX.

**Technologies:** TypeScript, VS Code Extension API, Node.js, GitHub Actions

**Education**

---

**MSc in Complex Adaptive Systems**

2022–2024

*Chalmers University of Technology, Gothenburg*

**BSc in Engineering Physics**

2019–2022

*Chalmers University of Technology, Gothenburg*

**Languages**

---

**Swedish** (Native)   **English** (Native)   **Vietnamese** (Limited working, heritage)
